# Frontend Software Engineer

## 80-100%

Dear Ms. Kadar,

For the past six months, I have been sharing with my friends my desire to work in the field of sustainability. After reading your job description and learning about ecoinvent, I am thrilled to have found the perfect company. As you search for a front-end developer with a keen eye for UX/UI, I believe to be an ideal candidate.

Before joining a professional development team, I worked as a self-employed web developer for almost two years. During this time, I fully devoted myself to improving my programming skills and studied topics related to UX/UI.

At Constructor Learning (formerly Propulsion Academy), I have been working as a software engineer and instructor for over a year. In this role, I have contributed to various projects, including the company's website, internal tools like the application dashboard, and the backend API. With the freedom to propose and design new components using Figma, I had the opportunity to actively improve our web-based applications and implement innovative, user-centered solutions using ReactJS.

I first joined Constructor Learning as a student in the full stack bootcamp and was then hired as a teaching assistant. Staying informed about new technologies and trends has always come naturally to me. I used this ability to keep the curriculum continuously up-to-date and ensure its relevance and effectiveness. Furthermore, I mentored students by reviewing their coding projects, contributing to their growth and success.

As a colleague, I value transparent communication and critical thinking. I enjoy bringing new ideas to the table by thinking outside the box. A pleasant work environment and respectful interaction in a diverse team are essential to me. I actively live by this philosophy and firmly believe that it leads to collective success.

Your advertised position would offer me a great opportunity to use my experience in development and design to enhance the user experience of your future applications. I would strive to provide the best possible experience for users accessing LCI data and bringing my expertise and personality to your team.

Thank you for considering my application. I am excited about the possibility of becoming part of ecoinvent and working with a team dedicated to sustainability.

Sincerely,  
Giuseppe Di Guglielmo
